

ABSTRACT

A planar device for directional trolling is disclosed. The device comprises a planar, disk-shaped body, a quick release assembly for the quick release of a fishing line, the quick release assembly including a quick release arm that is pivotally attached to the planar, disk-shaped body, and a line locking assembly for securing a portion of a fishing line to the planar, disk-shaped body. A portion of the fishing line is secured to the planar body by the line locking assembly in the form of a spring and guide assembly in which the guide holds the fishing line and the spring holds the guide to the planar body.
